This page contains information about the publication and distribution of the book. It mentions the publisher, distribution details, and the page range. It also credits various individuals and institutions involved in the publication. The page includes details about the gallery exhibition related to the book, as well as the collaboration and support from different organizations. The page also lists the contents of the book, including chapters and sections on various topics such as new art from Venice Biennale, exhibitions, and contributions from artists and institutions. The page ends with a special thanks to all the artists for their enthusiasm in bringing the project to life.

# GLASSSTRESS WORKS:
- Glasstress 2009 at the 53rd Venice Biennale
- Glasstress 2011 at the 54th Venice Biennale
- Glasstress Riga 2011
- Glasstress Stockholm 2011
- Glasstress New York 2013
GLASSTRESS NEW YORK
NEW ART FROM THE VENICE BIENNALES
The Museum of Arts and Design (MAD, then known as the Museum of Contemporary Crafts) opened in 1966. Two years later the museum organized Louis Comfort Tiffany, a groundbreaking retrospective of America’s most renowned and influential glass designer around the year 1900. Since that time, the museum has been a pioneer in the United States, organizing exhibitions that have explored glass in its many forms. The exhibitions have focused both on individual studio practitioners and thematic overviews of glass as a global medium. This year America salutes the fifteenth anniversary of the founding of the American studio glass movement, a renaissance of artistic innovation in this medium launched in 1962 through the efforts of two pioneers: Harvey Littleton and Dominick Labino. The legacy of creativity and expertise in glass making that they founded has inspired and challenged hundreds, if not thousands, of young creators to embrace this most amazing of materials.

In this historic year The Museum of Arts and Design is proud to present Glasstress New York, an extraordinary international gathering of glass sculpture created in Murano at the studio of entrepreneur and mentor Adriano Berengo.

Berengo, the founder of Venice Projects, has engaged artists, architects, and designers from such diverse countries as the United States, China, Italy, Germany, The Netherlands, and Spain. The resulting works were originally commissioned for and presented at the Venice Biennale in 2009 and 2011. The pieces are dramatic and often provocative, ranging from independent sculptures to installations incorporating sounds and light to prototypes for production. The spirit of innovation and experimentation pervades the works in this exhibition; many of the artists and designers were given their first opportunity to work with this challenging medium, and in collaboration with the brilliantly capable master glass artisans assembled by Adriano Berengo. Since the beginnings of glassmaking in ancient Mesopotamia and its meteoric rise to international prominence in the Roman Empire, the magical medium of glass—a solid that takes on the appearance of a liquid—has attracted creative artists and designers to continue to push the medium into new realms. The history of the decorative arts in the West over the past two millennia is a testament to the limitless potential of the medium in both the realms of functional design and independent works of art. Ubiquitous in Roman-era glassmaking are vials, bowls, and containers to hold liquids or other materials, while one need only remember the stunning brilliance of the stained glass windows at St. Chapelle in Paris to realize that this material can achieve the heights of aesthetic needs.

Throughout the history of glass as an art and design medium, the majority of the skilled practitioners capable of working this demanding (and often dangerous) superheated material have remained anonymous. By the nineteenth century, industrial methods of glass production and a complex system of distribution of glass rendered this formerly prized material available to a massive audience of middle-class consumers. At the same time, this democratization of the material rendered it commonplace. It was not until the end of the nineteenth century when artists embraced the material as a valid and valuable medium for creating unique works of art, such luminaries as Louis Comfort Tiffany in the United States and Émile Gallé in France renovated the artistic reputation of glass, and from that point forward, the intimate relationships between glass and glassmaking as an art medium, a skilled craft, and as a design medium were forged. The twenty-first-century manifestation of this holistic phenomenon is seen in the works created by the diverse artists and designers who have participated in Glasstress. From its earliest incarnation and to some degree the result of the properties of glass to simulate organic forms, whether plants, flowers, or animals, nature has remained a powerful inspiration. This remains true for many of the artists represented in Glasstress. Such artists as Jan Fabre and Kiki Smith make use of glass in their sculptural installations featuring brilliant blue shifting pigeons and a colony of frogs, respectively. While the subject matter of the works are recognizable and familiar, their translation in glass moves them into a jewel-like hyperreality.

More abstract studies of nature are found in the work of Yutaka Sone, whose radiant studies of snowflakes in transparent glass make the ephemeral into a permanent form, while Britain’s Luke Jerram uses glass to take the viewer into the world of the microscopic by revealing the eerily beautiful world of deadly viruses. Ursula von Rydingsvard captures the rough tactility of wood in her Glass Corrugated, 2010, an ironical allusion to the destruction of wood (the artist’s primary material) by fire, a ritual burning without which glass could not exist. The delicacy of bamboo is evoked in the Starn Brothers’ assemblage of fragile glass rods, a delicacy and fragility in glass that contrasts with the limber flexibility of the organic material. Likewise, Marya Kazoun’s Frosty Ground: The Beginning, 2009, is suggestive of the ever-changing crystallization of moisture, the hoarfrost that coats grasses and twigs for a fragile moment. A profound intimacy between art and nature is recorded in The Seed of Narcissus, 2011, by Tomáš Libertíny; the artist has used a mirrored glass ovoid as a foundation upon which bees have built a wax mantel that encapsulates the alien glass form, effecting a fusion between the inert and the living, between the permanent and the ephemeral. The human form is also explored by several artists in Glasstress, notably Jaume Plensa, in the poignant and meditative elongated head of Cristo’s Frozen Dreams, 2010, and in the expressive Laura’s Hands, 2011, both made from cast glass. The artist uses the ability of the material to capture and transmit light to give each of the works an inner radiance that evokes the spiritual presence of the sitter. The same light-capturing property of glass, combined with the jewel-like colors that can be achieved in the medium, is effectively exploited by German artist Thomas Schütte, in his red and green male busts that stare blankly at each other across space with the same
air of alienation evoked by traffic lights in an empty middle-of-the-night intersection. American artist Joyce Jane Scott, long known for her provocative figural imagery created with glass beads, has extended her repertoire by creating a memorable cast glass figural group for Glasstress.

The world of industrial design is represented in Glasstress by the lively animated works of Spanish artists Jaime Hayon and Patricia Urquiola. Hayon’s Testa Mecanica, 2011, are spunky and engaging robot heads, more innocently toy-like than confrontive. Urquiola has created a menagerie of eccentric and perverse shapes that find their genetic core in a strange mutation part functional vessel—vases, bowls, pitchers—and surf-and-turf creatures ranging from jellyfish to barnyard fowl.

Time and its passing and the contradictory nature of memory is examined from several points of view in Glasstress. Silvano Rubino’s Addizione sottrattiva, 2009, is a dining room table notable for the absence of accoutrements—plates and cutlery that would normally inhabit this domestic space are presented as empty cutouts of space and, by implication, the interaction between two diners. Michael Joo’s lonely museum stanchions made entirely of glass are a painted and humorous commentary on security and regimentation of institutions that create systems to control and monitor access to some desired goal. The artist’s title for the work Expanded Access, 2011, underscores this dichotomy of freedom and control.

Time as a force of both physical and psychic presence is made tangible in Javier Pérez’s Carroña, 2011, a blood red chandelier made in the grandest of Venetian ornamental styles that has crashed to the ground, leaving behind only fragments of what was once perfect and beautiful, fragments being picked over by black crows. Among the simplest of the works in Glasstress and yet one of the most provocative is Vik Muniz’s untitled hourglass containing a full-sized clay brick rather than sand. In this work, time has literally and figuratively stood still. The rough and tactile presence of the brick is pitted against the fragile transparency of the glass. Time as we experience it is held in limbo, a metaphor for the vague territory that separates the physical world from the realms of the spirit.

mad has defined its role in the global museum community as an institution dedicated to the exploration of materials and process in the arts and design, and to the creative transformation of materials that results in works of significant visual, emotional, and intellectual content. mad also rejects the traditional hierarchies and boundaries that have separated art, craft, and design over the centuries. The diversity of creators involved in this exhibition, and the quality of the works that they have produced, are testaments to this belief and this commitment.

We are deeply indebted to Adriano Berengo for his ceaseless energy, vision, and generosity for making Glasstress New York a reality, and for making it possible to premiere this exhibition at mad. I also want to thank Susan Scherman, a founder of Venice Projects, for her commitment to new talent in glass. Many thanks also to Marco Berengo who has taken these projects around the world and to Laura Bresolin who coordinated the exhibition. From mad, thanks go to David McFadden who helped to curate the exhibition, and to Elizabeth Kirrane, Nurit Einik, and Dorothy Globus who made the exhibition at mad come to life. And finally to Goya Contemporary Gallery, Suzi Cordish, and an anonymous donor who made this new catalogue a reality.

We hope that with these new experimentations in glass the artists have expanded their horizons and opened a new chapter in glass history.
I became interested in glass around 1985. An interest in modern and contemporary art had prompted me, right from the beginning, to study the way in which glass had been used in the context of modernism—that is, since the split from nineteenth-century aesthetic canons and the search for new forms of expression expanded to include materials which, until that time, had been considered foreign to the plastic arts. Despite this new direction and the degree to which glass working techniques had developed over the centuries, with the objects created reflecting a particular style and having incomparable formal qualities and elegance, glass continued, even in modernist times, to be considered a material more in keeping with design than with the art of sculpture. Glass was thought to be inadequate for the creation of works of art, mainly because of the ways in which the material was worked, requiring the use of specialized labor. Indeed, if art has always welcomed such materials as wax, clay, marble, or wood, the same cannot be said for glass, which can only be shaped at extremely high temperatures. The artist who chooses to work with glass can design a form; define its color, weight, and transparency; manipulate this incandescent material himself. It could be argued that bronze sculptures also require the use of master craftsmen (though this has never made bronze a material foreign to the plastic arts). However, these sculptures come from forms that the artist’s own hand has molded and monitor the different stages of the process. Yet he is rarely able to be considered a material more in keeping with design than with the art of sculpture.

Glass was thought to be inadequate for the creation of works of art, mainly because of the ways in which the material was worked, requiring the use of specialized labor. Indeed, if art has always welcomed such materials as wax, clay, marble, or wood, the same cannot be said for glass, which can only be shaped at extremely high temperatures. The artist who chooses to work with glass can design a form; define its color, weight, and transparency; manipulate this incandescent material himself. It could be argued that bronze sculptures also require the use of master craftsmen (though this has never made bronze a material foreign to the plastic arts). However, these sculptures come from forms that the artist’s own hand has molded and assembled using other materials. On the other hand, it cannot be denied that, over the last half century, artists have increasingly entrusted to skilled artisans the production of their works, using ever more varied materials. If artists in the early decades of the twentieth century earned the right to appropriate everyday objects, from the 1960s onwards—namely, with pop art in the US and new realism in Europe—the new frontier became a definitive statement that a work’s intrinsic value is found as much in its conceptual appearance and shape—that which is implicit in its dimension—namely, that which is implicit in its appearance and shape—that confers its identity on a work in glass. In other words, it is this conceptual dimension that lets us recognize that a work in glass conveys something that no other material could express.

**GLASS, MON AMOUR**

**Adriano Berengo**
Focusing on only some of the works on display in the latest editions of Glasstress at Palazzo Cavalli-Franchetti in Venice, part of the 54th Venice Biennale, and now chosen for a further limited selection for this exhibition at The Museum of Arts and Design in New York, does not mean they are more important than the others, but simply that they are best suited for a reflection on the use that an artist can make of glass today. Rather than an art material, glass has long been considered a material for furnishings. With few exceptions, such as Duchamp’s The Large Glass, glass was used more in the twentieth century to create design objects than veritable works of art. This way of understanding glass was lacking in the early 1980s with the strengthening of the postmodern view, which considered the experiences of the past with an eye to using them instrumentally in new contexts. Moreover, this way of understanding art continues to this day, as demonstrated by Expanded Access, made by Michael Joo in 2011 for Glasstress. Interested in the way men tend to limit their personal freedoms by subordinating them to the needs of social organization, Michael Joo has repeatedly dealt with barriers created to make certain areas inaccessible or to indicate obligatory routes. The most common among these are the string or cloth barriers supported by columns of steel or wood that each of us has seen in theaters or museums. Not being immovable, these objects mostly tend to inform us that there is a boundary beyond which one cannot go. Therefore, they act exclusively on a psychological level. In Adriano Berveng’s kiln, in Murano, Michael Joo created examples of these boundaries from blown glass polished to a mirrored finish, giving them a sense of extreme fragility. While bumping into ordinary steel barricades and rope does not involve special risks, hitting the glass barriers made by Michael Joo means inevitably damaging them. Furthermore, the skill with which these glass barriers are made deceives the spectator, who at first glance is led to believe that they are made of steel. It is a sort of visual trap that can lead one to get dangerously close to the work without perceiving its fragility. Glass has allowed Michael Joo to give an ambiguous identity to a physical object and thwart the function that its shape suggests. Expanded Access takes advantage of both the theories and dynamics of early twentieth-century Duchamp and those that characterized the conceptualism of the 1970s. Using blown glass rather than a resistant material—such as bronze, steel, marble, or resin—to reproduce the barriers is in itself a choice sufficient to define the content and meaning of the work. The language remains unchanged, which is that of sculpture, even though what does change is the way it relates to the spirit of the time.

From Duchamp onwards, many sculptors speculated a good deal on the possibility of altering the meaning of an object through the title of the work or by creating unlikely associations, namely transferring the idea of beauty from the visual plane to the mental one. Aware of the fact that beauty is manifested by arousing astonishment and wonder, the artist embraced the opportunity to engage the spectator on a conceptual level through images capable of revealing an intuition. Expanded Access by Michael Joo demonstrates that this aesthetic vision, which implies the encroachment of art into areas once considered the prerogative of philosophy, is still relevant today. While on the one hand these boundaries promise to protect, the use of a brittle material such as blown glass means they can easily break, injure, or harm. The work is thus a reflection on how what seems to be and what actually is are not the same.

A similar idea of fragility is expressed by Carroña, an installation by Javier Pérez also made for the 2011 edition of Glassstress. The work consists of a classic Venetian red chandelier with leaves, flowers, and rings that the artist broke into pieces by letting it drop to the floor from up high during a sort of performance. On it are crowded ten stuffed crows that seem to feed voraciously on its fragments. The ancient fables tell us that the plumage of the crow, once white, became black as punishment for the sin of excessive vanity. Through the symbolic use of color, this bird is thus linked to the concept of guilt.

Blood vessels are frequently depicted in Javier Pérez’s work, sometimes under the guise of red horsehair, other times as branches or shrubs. In Carroña the blood vessels are brought to mind by the joints of blown glass that support the goblets. As much as the chandelier is like a found and modified object, shattered on the floor, it evokes flesh and blood and on the symbolic level becomes a dramatic representation of history crumbling into a thousand pieces. Hence Carroña equates the existential crisis assailing and tearing up contemporary individuals with the impossibility of the West to see their history reconstructed and projected into the future. The crows gathering the shards highlight that we are at a tipping point of no return, the contrast between the black and the red, between the impenetrability of the black and the transparency of the red, envelops the entire scene in a pall of bereavement. In Catholic countries, on an individual level, death is experienced as calamity and misfortune, while theologically and culturally it is associated instead with the hope of the Resurrection, the promise of an afterlife. The funeral rituals and the period of mourning have always been the necessary steps for channeling the pain within a cathartic process tied to the idea that becoming necessitates death because it goes from “what has been” to “what will be.” Over time the idea of becoming and that of progress became increasingly intertwined, ending up being the same thing in most cases. Starting from the French Enlightenment and German Idealism, in particular, and moving through the Industrial Revolution of the second half of the nineteenth century, the idea of progress found its natural outlet in the avant-garde concept developed by the first modernist art movements. The twentieth
in other words, these examples are intended to show that glass material is not alien to contemporary art and that actually, precisely because it has been kept at the margins of modernist experimentation, can now tap unexplored areas.

This is demonstrated by the work of Kiki Smith, an artist who has devoted much attention to the expressive possibilities of this material. Glass, says Kiki Smith, “has excellent qualities and a special light that seems to come from the contemplation of a Christ of ice; like the skin, it gives the illusion of being fragile and impenetrable at the same time.”

As much as there has been an attempt in recent decades to distance itself from modernism, to go beyond it, the works cited above show that today’s art is moving in the path traced by the historical avant-garde who, particularly with Constantin Brancusi and Marcel Duchamp, redefined the concept of sculpture. Prior to Brancusi’s modular masses with no pedestal, and before Duchamp’s readymades, sculpture was understood as statuary made primarily of wood, marble, and bronze. These were the materials that lent themselves best to that way of understanding sculpture and the execution of bar-relief sculpture, i.e. the construction of narratives with figures emerging from a plane. Clay, ceramics, and glass, on the other hand, were the domain of the applied arts and considered artistic expressions closer to a craft, which however fine the quality did not, however, enjoy the same consideration as the plastic arts. Thanks to art nouveau, between the late nineteenth and early twentieth century, at the same time as the invention of photography, which had freed art from the taste of the old bourgeoisie, which wanted to subvert the aesthetic values.

In the second half of the nineteenth century, when the inquietudes that would lead to the birth of the avant-garde movements were already apparent, artists were rejecting the idea that a work of art could have a useful function. At that time, glass took on a significant role in the creation of artistic objects. After all, glass has always been an ideal material for decoration because of its transparency, its letting light shine through lending brightness to the colors. Nevertheless, however hard the artist strove to embody a new style linked to the spirit of the times, art nouveau objects made of glass—or of glass combined with other materials—had a purpose of use and therefore remained linked to the context of the applied arts. Doors and windows, chandeliers, plates, vases and jewelry had not yet received the full dignity of plastic art works, as has happened in recent times.

In the second half of the nineteenth century, when the inquietudes that would lead to the birth of the avant-garde movements were already apparent, artists were rejecting the idea that a work of art could have a useful function. At the same time as the invention of photography, which had freed art from the documentary role, the new languages did not concede anything to the taste of the old bourgeoisie, which wanted to subvert the aesthetic values. The decline of portrait painting was not simply because a photograph could reproduce reality more faithfully and more quickly than a painting, it also corresponded to a liberation from the numerous constraints that the past had placed on art, preventing them from designing a better future. From this perspective, the death of theories, phenomena, and trends now considered foreign to the spirit of the times was seen as a celebration and not as bereavement. In the postmodern era artists have considered it a limitation only to endeavor to look forward. Consequently, they have looked back, without nostalgia and with utilitarian behavior, to recover the fragments in random order, improperly assembling them and placing them in contexts related to the contemporary. Hence the use in today’s art of old objects, forms, and materials, glass included.

Like Corvoio by Javier Pérez, Antonio Riolli’s installation, Ashes to Ashes, 2009/2010, also presented at the 2011 edition of Glasstress, is a dramatic representation of history that is crumbling. The installation consists of about twenty containers of blown glass in the shape of wine glasses, hermetically closing within the swollen stem the ashes of a book the artist took from his library and burned. About 35 to 40 centimeters high each, and with a diameter of between 6 and 25, these reliquaries aligned on glass shelves have been suffused of time based on a design by the artist, in Massimo Lunardon’s glassworks, in the province of Vicenza. The very thin glass binds these artifacts to the glassmaking tradition of Central and Northern Europe, which is very different from that of Venice. At a formal level these glasses are inspired by the Italian Medieval and Renaissance periods, but also by forms taken from international design.

Book burning is unanimously considered a barbaric profanation. Inevitably the mind returns to the book burning of 1933, in Berlin, at the hands of the Nazis, a ritual that was to consecrate the superiority of German culture and science fiction stories. Conceived as a work in progress—many titles will crowded the shelves of the spatially infinite library of Jorge Luis Borges. Burning his favorite books is also a proper and apotropaic gesture for Antonio Riolli; the ashes are not scattered to the wind, but lovingly collected and piously protected in special reliquaries. The books kept in these glass goblets thus represent the mark left by every book in the existence of people who, as artists, transcended their own individuality.

Other examples of interesting glass works included in this exhibition are Hourglass, 2010, and Sheet of Bubble Whip, 2011, by Vik Muniz. The first is a large blown glass with a crunchy red brick inside. Despite having the shape and materials of an hourglass, this object does not in fact have its function. Sheet of Bubble Whip looks like a sheet of bubble wrap simuously folded over itself. Vik Muniz has chosen glass to imitate this most appropriate material for packing fragile objects, such as those made of glass itself. In these as in other works by the artist we recognize the object as a model, but what we see does not correspond to the real nature of the elements that constitute it. To both of these works, the aim is to demonstrate the misleading nature of the image in relation to its historical memory and to the experience of the spectator. Apart from the many implications expressed by the works under consideration, what I wish to emphasize is the originality of the use of glass, which thanks to its properties becomes part of itself. In other words, these examples are intended to show that glass material is not alien to contemporary art and that actually, precisely because it has been kept at the margins of modernist experimentation, can now tap unexplored areas.
The Bauhaus manifested interest in glass as a material suitable for design, but also for art. There was so much interest, in fact, that it led to the establishment of a workshop for glass decorating...

The Bauhaus manifested interest in glass as a material suitable for design, but also for art. There was so much interest, in fact, that it led to the establishment of a workshop for glass decorating...

And architecture were conceived and perceived. The presence of such arts and applied arts, overlapping them until they coincided. The Bauhaus manifested interest in glass as a material suitable for design, but also for art. There was so much interest, in fact, that it led to the establishment of a workshop for glass decorating, whose direction was entrusted first to Paul Klee (in 1919) and then to Josef Albers as teachers in a school of architecture and design.

...as if it were to that of Piero Manzoni, and felt and animal fat to the work of Joseph Beuys. For example, fire refers to the art of Yves Klein, shit to that of Robert Smithson, and the inverted urinal presented with the title The Bride Stripped Bare by Her Bachelors, Even, also known as The Large Glass.

Between 1913 and 1915, Marcel Duchamp gave a glass ampoule the title of Paris Air. The greatest emphasis on glass, however, is found in his work The Bride Stripped Bare by Her Bachelors, Even, also known as The Large Glass. Duchamp worked on this emblematic example of modernism from 1913 to 1923, leaving it unfinished. Consisting of two glass panes framed by metal and steel mounts, The Large Glass is seen as a spacious window with cryptic forms inside created with oil paint, silver and lead foils, and wires. As is well known, during transport the glass suffered several cracks, but the artist decided to accept the intervention of chance as an integral part of the work.

The impact of the materials in connoting the art object is such that even a revolutionary work like the bronze sculpture Unique Forms of Continuity in Space, 1913, by Umberto Bocconi lends itself to be perceived more as an expression of a renewed classicism than as a real break with tradition. Entering into modernism not only meant renouncing the themes and languages that had characterised the visual culture from the fourteenth to the nineteenth century, from the Middle Ages to Romanticism, it also meant giving up non-artistic materials that had characterized classical art and sculpture.

Therefore, it was not a matter of substituting one material for another, but rather of making the selected material a functional tool for the formal and conceptual result that the artist tended. In light of all of this it can be argued that, having expanded the catalogue of usable materials, artists favored the identification of their work with the chosen materials.

The 1960s, synthetic materials like plastics and foams appeared in avant-garde art. A decade later, the choice of material played such a significant role in the work of individual authors that it became a determining factor in defining their aesthetic. For example, fire refers to the art of Yves Klein, shit to that of Piero Manzoni, and felt and animal fat to the work of Joseph Beuys.
The 1960s and 1970s were years of poor and discarded materials: iron, chalk, wax, straw, burlap, glass splinters. Although uncommon and of little value, within the work they obtained the same dignity as wood, marble, and bronze. There was nothing that could not become a part of the work, including ashes or organic materials found in nature (plants, fruits, vegetables, etc.). In this context, glass obviously became a part of the work as an industrial product and not as a mass to be molded since it requires an elaborate and expensive process.

Similarly, the mirror makes us think of Michelangelo Pistoletto, wax and the bundles are associated with Mario Merz, iron with Janis Kounellis, Richard Serra, and Carl Andre, stones and earth with Robert Smithson and Richard Long, granite with Giovanni Anselmo, felt with Robert Morris, pitch with Gilberto Zorio, and frost (obtained with the resistance of a refrigerator) with Pier Paolo Calzolari. Many other examples could be cited as well, including artists of the decades that followed. Even though the individual artist’s choices may not be tied to one material or another—so each one’s body of work is actually far more complex—the examples above show that for many of them the material used is a sort of trademark. The innovation of this aesthetic vision also lies in the fact that artists can make use of any material or medium that helps achieve the pre-established goal, provided the use has a theoretical justification.

The 1960s and 1970s were the years of poor and discarded materials. In this context, glass obviously became a part of the work as an industrial product and not as a mass to be molded since it requires an elaborate and expensive process. This then new aesthetic vision involved painters, sculptors, performers, designers, and architects, but also poets, novelists, film and theater directors, musicians, set designers, and scriptwriters. There was also the tendency to give body to the sculptures shaped by the hands of its author, interested in following the entire process leading to the bronze casting. Artists started to feel attracted to the fire of the kilns again, thus looking at glass as a sculptural material. This is highlighted in this exhibition, which shows how glass offers artists, as well as designers, expressive possibilities that transcend the memory of elegant, useful objects created in the best glassworks decades and centuries ago.

One of the effects of the renewed interest in traditional expressive forms was a return to the idea that the freedom of art is linked to its uselessness. Is it perhaps not a restriction to subordinate form to a function? Once again we have the debate about the distinction between plastic arts and design. Every aesthetic vision that came from the historical avant-gardes was, after all, the result of overcoming a pre-existing vision, which by nature was to be overcome quickly in the space of a decade. From this perspective, drawing a boundary between the various arts does not mean classifying them, but defining the identity of the creative work (also) through its ability to stand out. As repetitive as it might sound, it is by accepting the differences that the qualities free themselves from discrimination and take on dignity, which is not the same as claiming a return to order. The path of art is an evolutionary one, in the sense that everything the artist does takes into account what was done by those who came before him. As many have pointed out, it is this knowledge that makes us realize that current art, compared with what preceded it, is not better or worse, just different. And it is this awareness that allows us to identify in the alternation of themes and contrasting visions the return of paths that cyclically present themselves in a new look.

The marriage between art and design has expanded the area of expressive possibilities for the former as well as the latter. Understanding that the plastic artist is free to manufacture an object intended for use, and the designer to create an object as a single exemplar with no practical function, we feel the need for new criteria to evaluate both art and design. It is a need revealed by the inability of art in recent decades to move beyond modernism—of which postmodernism is the tail—with the same determination and radicalism with which modernism ferried the new man beyond modernism—of which postmodernism is the tail—with the same ability to stand out. As repetitive as it might sound, it is by accepting the differences that the qualities free themselves from discrimination and take on dignity, which is not the same as claiming a return to order. The path of art is an evolutionary one, in the sense that everything the artist does takes into account what was done by those who came before him. As many have pointed out, it is this knowledge that makes us realize that current art, compared with what preceded it, is not better or worse, just different. And it is this awareness that allows us to identify in the alternation of themes and contrasting visions the return of paths that cyclically present themselves in a new look.

The marriage between art and design has expanded the area of expressive possibilities for the former as well as the latter. Understanding that the plastic artist is free to manufacture an object intended for use, and the designer to create an object as a single exemplar with no practical function, we feel the need for new criteria to evaluate both art and design. It is a need revealed by the inability of art in recent decades to move beyond modernism—of which postmodernism is the tail—with the same determination and radicalism with which modernism ferried the new man in the century of psychanalytic, ideological revolutions, and discoveries in science and technology once considered utopian. In anticipation of an art that expresses the new turning point, there is nothing left to do but once again question the rules of the game made outmoded by also being taken up in the classrooms of provincial academies.

I think that there has been always a big gap between glass art and normal art ... what Adriano Berengo really tries to do is bring them closer together.

Joep van Lieshout (artist and designer)
Barbara Bloom was born in Los Angeles in 1951. She lives and works in New York. She is an installation artist, a designer, and a photographer. Once she completed her studies at the California Institute of the Arts, she lived for many years in Amsterdam and Berlin. Known for her meticulously crafted works, precisely detailed and flawlessly executed, Bloom focused her research on the relationships between objects and images and the meanings implicit in their placement and combination. In her artwork, beauty is a premise for investigating illusion, fragility, and transience to expose the subliminal ideologies of modern visual culture. Her witty and elegant installations combine objects that she has collected in her vast archives with manufactured ones, and challenges conventional perceptions with wry commentaries on the shifting notions of value and the practice of collecting, the desire for possession. Moreover, she examines the concept of the artist as an eccentric, narcissistic collector and curator of her own history, producing works of great visual glamour together with installations which include different media: video, sound, and photography. Her work has been exhibited in museums such as MoMA in New York, the Museum of Contemporary Art, Los Angeles, the vat, Vienna, the Serpentine Gallery in London, and several other international prominent venues such as the Venice Biennale where, in 1988, she received the Dune Mille Award. In 1989, she received The Louis Comfort Tiffany Foundation Award, and was the recipient of awards from the Ogdenheimer Foundation, the Winner Center for the Arts, and the Getty Research Institute.

Alongside the Biennale in Venice, for the second time, there is also plenty of art made of glass in this city on the lagoon ... Berengo prophesies the imminent arrival of a new era in glass art.

Reinhold Ludwig (Art Aurea)
El Ultimo Grito is the creative partnership between Rosario Hurtado and Roberto Feo. Hurtado was born in Madrid (1966) and Feo was born in London (1964); both work and live in London. El Ultimo Grito was founded in London in 1997. The name “El Ultimo Grito” translates from Spanish to English as “the last shout” reflecting the witty names they give to their products, summing up the heart, intelligence, and humor of the idea. The focus of their work is on our’s relationships with objects and culture, which they continuously research, exploring those relationships across disciplines as a wide variety of projects which range from interior design to graphics. El Ultimo Grito describe their work as a creative studio that places its focus on design and where the idea takes center stage. They receive inspiration from ordinary daily tasks and various materials after experimenting with their tactile or engineering properties. Their most recent work, including Imaginary Architectures, 2011, questions cultural and social preconceptions and asks how contemporary culture incorporates, reuses, and reinterprets the systems and structures it has inherited from the past.

While the designers have steered away from preconceived definitions and prescribed design paths in their work, this strategy did not prevent them from teaching at some of the most prestigious design colleges, including Kingston University, Royal College of Art, and Goldsmiths University in London. Nor did it prevent them from working for renowned companies and institutions like Selfridges, Budweiser, Hugo Boss, the Victoria and Albert Museum, and Southwark Council.

In 2008 El Ultimo Grito curated nowhere/now/her: Exploring New Lines of Invesigation in Design at the Líobreal in Gijón, Spain. The exhibition explored “experimental design” and sought to challenge the conception we have of design. The exhibition presented over sixty works, which were shown in a colorful space designed by Patricia Urquiola studio with graphics created by Fernando Gutierrez.

COURTESY SPRING PROJECTS, LONDON
Jan Fabre was born in 1958 in Antwerp, where he lives and works. Fabre is known as a versatile figure: a visual artist, a choreographer, a filmmaker, and a writer; he has gained equal fame in each field of action. His work has an all-absorbing and interdisciplinary character. In Fabre’s research the study of the human body and its transformations prevails, and he deals with the concept of metamorphosis, through the extreme exploration of human corporeity. A kinsman of the famous entomologist Jean-Henry Fabre, he is attracted to the study of nature and has a real passion for the sciences, entomology in particular. The use of insects is a distinctive feature of his work. He has also created a particular “bic blue” that he uses to coat different kinds of surfaces. Man, nature, and their mutual relations are his favorite themes. The many venues where his works have been displayed include the Venice Biennale in 1984, 1990, and 2003, Documenta in 1987 and 1992, Kassel, Bienal de São Paulo in 1991, Lyon Biennale in 2000, Valencia Biennale in 2001, Istanbul Biennale in 1992 and 2001. Amongst the leading exhibitions there are Anthropology of a Planet at Palazzo Benzon, Venice, in 2007, Jan Fabre au Louvre. L’Ange de la metamorphose, in 2008, From the Cellar to the Attic. From the Feet to the Brain at Kunsthaus Bregenz, in 2009 From the Feet to the Brain at Arsenale Novissimo, Venice, Art kept me out of jail. Performance installations by Jan Fabre 2001–2004–2008 at m hka, in 2010. In 2011, the Kröller-Müller Museum, Otterlo, hosted the solo exhibition Hortus / Corpus.

COURTESY BERENDI PRIVATE COLLECTION, VENICE
Spanish artist and designer, born in Madrid in 1974. As a teenager, he plunged into the worlds of skateboarding and graffiti, passions that, in the years ahead, would lay the groundwork for his art and which are still prominent today in the detailed and bizarre work that sets him apart. He studied Industrial Design in Madrid and Paris. In 1997, he joined Fabrica, the design and communication academy founded by Benetton, where he worked closely with the legendary photographer Oliviero Toscani. In a very short time, he moved from being a student to head of the Design Department.

Eight years later he branched out on his own, making his debut with Mediterranean Digital Baroque, at the David Gill Gallery in London, an exhibition that revealed his altogether unique vision, blending irony and surrealism primarily through the use of ceramics. It was followed, first, by Mon Cirque, seen in Frankfurt, Barcelona, Paris, and Kuala Lumpur, by a solo show at the Aram Gallery in London, and appearances at the Salone del Mobile in Milan, the Museum of Design in London, the Vito Gallery in Rotterdam, the Groeninge Museum as well as Art Basel. Hayon’s profound knowledge of artisanal potential and quality combined with his creativity have allowed him to go beyond the barriers and limitations imposed by the various materials, resulting in the many collections he has created for such clients as Boulard and Ioana, More, Metalarte, Swarovski, Benchmark Design, Pipper Heidsieck, Gaia and Gina, Fritz Hansen, So London, in Barcelona, Camper, and Bonas Ceramica Cencetti. In addition, he has produced noteworthy collections for Bosa, the “Crystal Candy Set” collection for Baccarat, and “Fantasy” for the Spanish porcelain manufacturer Lladró. These collections have placed Jaime in the vanguard of the production of pieces that blur the line between design, art, and decoration by creating sophisticated artisanal objects whose complexity is a perfect reflection of the world of contemporary design.

He has won numerous awards including “Best Installation” (Icon Magazine), “Breakthrough Creator” (Wallpaper Magazine), and in 2006, the Kite Dee International Award. Jaime was the guest of honor at the 2008 Intérieure Biennial in Belgium, becoming the youngest person ever to receive this honor. Jaime is currently working on designing the interiors of leading hotels, restaurants, and shops around the world.

of tradition.

Chiara Pasqualetti (Arte)
Luke Jerram, an English artist and researcher, was born in Stroud in 1974 and currently lives and works in Bristol. He graduated with honors in Fine Arts at the University of Wales Institute in Cardiff in 1997. Thanks to his craftsmanship and his interest in experimentation, Jerram was able to establish himself immediately first on the English stage and then worldwide. He is appreciated for the peculiarity of his glass creations, the subject of which are viruses and bacteria, designs that Jerram has called “Glass Microbiology.” Versatile and creative, his artistic expressions encompass various techniques ranging from sculpture to installations up to live arts projects.

The artist’s interest in microbiology has led him to investigate human perception and its limits, the contrast between the beauty of art works themselves and what they represent for people. The artist pays great attention to sensations and perceptions as he himself suffers from a visual deficit that prevents him from recognizing colors. Although he has worked as a researcher at the University of Southampton and his team consists of scientists, Jerram insists that he is not a scientist; in fact, he finds the fields of applied science too specialized and limiting in comparison to the world of art. He is very popular in the United States, and his works have been exhibited in such major American museums as MoMA and the Museum of American Glass. Through a series of science-like activities, he has received several honors, including the 2007 Medical Imaging Institute Award, the 2010 Rakow Award, and a fellowship at The Museum of Glass in Washington in 2011.

Michael Joo was born in Ithaca (New York) in 1966 to Korean parents. He graduated in Biology from Washington University in 1989 and then received his Master’s in Fine Arts in 1991 from the Yale School of Art. He now lives and works in New York.

Ever since the beginning of his artistic exploration, in his works he has always tried to link the mechanisms through which visible and living entities, such as the human body, plants, and animals, are connected to invisible entities, i.e. the energy they need to affirm their existence.

He later focused his work on the exploration of his own identity and on the intersection of binary concepts such as nature-science, East-West, religion-ethics, inner-outer: the simultaneous presence of contrasting elements reveals his aspiration to re-compose an essential order of the universe.

His work is an invitation to reflect on the concept of hybrid, through a process that begins by deconstructing the object and ends with a de-uniform union of deconstructed objects, as in Family (Tradition)… presented at the 49th Venice Biennale, showing four bronze figures, representing a family, connected one to the other via an element of style beginning at the father’s knees, through the mother’s back, then the head of the older daughter, to end at the penis of the younger son, closing a generational circle of cultural transformation.

He recently tried to reconcile in his work Buddhist spirituality and the analytic approach of Western civilization. In 2006 he participated in the 6th Gwangju Biennale, winning the Grand Prize with Bodhi Obfuscatus (Space Baby), according to the critics “a clear example of West reconciling with the East.”

In addition to representing Korea again at the 2011 Venice Biennale, he exhibited at the Whitney Biennial in 2000, and in many other museums and galleries in Europe and the United States, such as the Stedelijk Museum in Amsterdam, the Walker Art Center in Minneapolis, and the Serpentine Gallery in London. His works are included in the permanent collection of the Guggenheim Museum and the MoMA in New York, the ucla Hammer Museum in Los Angeles, the Moderna Museet in Stockholm, and the maat in Paris.

[THE GLASS] WHEN MOVING FROM ONE STATE TO ANOTHER, IT REALLY CHANGES THE FEELING OF YOUR BODY, OF YOUR OWN MORTALITY.

MICHAEL JOO (ARTIST)
Marya Kazoun was born in Beirut in 1976. She lives and works in New York and Venice. Marya Kazoun grew up in Beirut during the war years. In 1984 her family fled the war the first time by moving to Switzerland. Later she lived in Montreal with her family where she became a Canadian citizen. She later returned to Beirut and completed degrees in Interior Architecture and Fine Arts at Lebanese American University. In 2001 she moved to New York and completed an MFA in Fine Arts at the School of Visual Arts. Her works are mainly installations and performances; she uses 3D low reliefs, painting, drawing, and photography as support for her installation pieces. Her art is a personal perception of reality. She creates worlds that are parallel to the one we live in. She explores the micro vs the macro, the extremely beautiful vs the extremely repulsive. She gives a voice to herself at five years old. Her art is an attempt to domesticate the dark. She uses very common materials like tissues and fabrics to transform them and give them another life. Her approach to art is strongly humanistic, emphasized by her dexterity with materials and mastery of ancestral techniques like sewing and weaving. She took part in the 51st Venice Biennale in 2005 with a solo show, Personal Living Space.
Glasstress has become, in its 2009 and 2011 incarnations, perhaps the next-most-visited venue not a part of the biennale itself.

James Yood (Glass | the urban glass art quarterly)
MARTA KŁONOWSKA

Marta Klonowska was born in Warsaw in 1964. She currently lives and works in Düsseldorf. Already during her studies at the Academy of Fine Arts in Wroclaw, Poland, and later at that of Dusseldorf, glass had become her preferred artistic medium. Today she is known for her numerous canine sculptures that depict the four-legged companions of important historical figures, capturing their natural poses in colored glass. For the subjects of her works, the artist finds inspiration in the paintings of the great masters, in which pets—mostly dogs—are side by side with the subjects, acting almost like prestigious objects that are exhibited as symbols of wealth and power. Thanks to her work, the artist succeeds in telling the secondary stories of these ancillary characters. Marta Kłonowska calls attention to the interplay of historical and artistic references reproducing each painting (usually in the original size) in a single color that matches the color of the glass chosen for the sculpture. To construct these works, she starts with a metal skeleton that is then carefully covered with sharp shards of glass, as in The Morning Walk, 2006. She has received such important awards as the 1999 Artist in Residence at the Cité International des Arts in Paris and the 2002 Artist in Residence at the Akerby Skulpturpark in Sweden. She was also a finalist in the 2006 Bombay Sapphire Prize in London. Among her most recent exhibitions are And Domestic Animals at the Finnish Glass Museum in Riihimäki (2009) and t.b.a. (2011), and Geschöpfe (2011) at the lorch+seidel gallery in Berlin. Since 2011, one of her works has been on display at the Corning Museum of Glass for the Ben W. Heineman exhibition at the Sr. Family Gallery of Contemporary Glass in New York.

The intention of Glasstress to continue “The Artists’ Exploration of Glass, Its Possibilities and Their Visions” has certainly been met with what is an excellent exhibition.

Chris Bird-Jones (Glass Network)
The artist and designer Tomáš Libertíny was born in 1979 in Slovakia where, in 1999, he began his university studies by attending the School of Industrial Design. In 2001, when he won a scholarship from the George Soros Open Society Foundation, he decided to study at the University of Washington in Seattle. Soon after, he decided to continue his education at the Academy of Fine Arts and Design in Bratislava. He became interested in design, conceptual art, and the technique of construction and disassembly. In 2006, he finished university obtaining an MFA from the Eindhoven Design Academy, achieving a fully mature style. The artist, in fact, definitively abandoned the idea of using a pictorial method of painting for his works and began to explore the use of new construction materials to express his ideas. In 2007, he exhibited Honeycomb Vase at the Salone del Mobile in Milan, introducing the concept of “slow prototyping” and the theme of the contrast between nature and culture. Feeling the need to provide a conceptual basis to his art, he began writing a series of critical essays that drew inspiration from such sources as Freud and Lipovetsky that gathered his thoughts on the creation of a work of art. In 2007 he opened a studio in Rotterdam where he has devoted himself to studying new artistic techniques and new design strategies. His works are in the permanent collections of several world-class museums including MoMA in New York, the Museum Boijmans Van Beuningen in Rotterdam, and the Cincinnati Art Museum. In 2009 he was named Designer of the Future at Design Miami/Basel and was a winner of the Dutch Design Award.
THE UNBEARABLE LIGHTNESS
2010
120 x 120 x 45 cm
COURTESY CARPENTERS WORKSHOP GALLERY, LONDON, PARIS
Beth Lipman was born in Philadelphia, in 1971. The artist now lives and works in Sheboygan Falls, Wisconsin. Optimizing glass’s clarity, fragility, and absence of color, Beth Lipman’s opulent sculptures and photographs of meticulous, glass-based compositions are a contemporary response to and homage of still life paintings from the seventeenth–twentieth centuries. Contemporizing the tradition of depicting real life objects dates back to the first century. Lipman speaks to the ephemerae nature of life and our universal truths, interpreting on a political, moral, and theological level current economic or socio-cultural events. One can draw a direct parallel between the tradition of still life painting and art made from traditional craft processes, for instance glass, and Lipman explores the possibilities in her studio practice. She studied at the Tyler School of Art, Temple University (Philadelphia), the Massachusetts College of Art (Boston), and the Pilchuck Glass School (Seattle). Lipman’s work has been exhibited internationally including exhibitions at the Institute of Contemporary Art/cec, Maine; nmo Museum, Rhode Island; Milwaukee Art Museum, Wisconsin; Gustavssbergs Konsthall, Sweden; and the Smithsonian American Art Museum, Washington, dc. She is the recipient of numerous awards including a Louis Comfort Tiffany Foundation Grant, a sia Artist Grant, Wisconsin Arts Board Fellowship, and a Beth Cleaves Foundation Grant. Lipman’s work is in the permanent collections of the Brooklyn Museum of Art, the Smithsonian American Art Museum, and the Corning Museum of Glass, in New York, among other prestigious international institutions.
BRIDE
2010 / DETAIL
369 x 228 x 228 CM
COURTESY CLAIRE OLIVER GALLERY, NEW YORK
Vik Muniz was born in São Paulo, Brazil, in 1961. He lives in New York. Initially, a draftsman and sculptor, photography took center stage in his art beginning in the 1980s, after also working in the world of advertising. Muniz’s interest is directed especially at photographic reproductions of his own 3D works. In his works, however, the photograph is just the last link in a series of interlocking steps that connect technical reproducibility, manual skills, and collective memory. His artistic exploration mines expressive codes and languages, thanks also to his use of unconventional elements. Chocolate, peanut butter, honey, sand, dust, tomato sauce, dirt, wire, and cotton wadding are the elements he has used to create the visual compositions later recaptured through an optical device. The end result is, therefore, a photograph of the work and not the work itself, which, in fact, has been destroyed.

In his series *Pictures of Dust*, 2000, Muniz used dust, collected over a number of months in the Whitney Museum, to create works that reproduce the museum’s collection of minimalist and post-minimalist sculptures. The materials he uses frequently offer an opportunity for reflection and social criticism, as in the *Sugar Children* series, 1996, which condemns the exploitation of children who work harvesting sugar by reproducing their faces and their poses as they work, precisely by using various types and colors of sugar itself.

His cinematographic work *Wasteland*, 2010, also continues in this direction with the artist’s portrait of catadores, the rubbish collectors who live and work in Jardim Gramacho, the landfill on the outskirts of Rio de Janeiro. Vik Muniz has exhibited his work in numerous American and European museums, including the Metropolitan Museum of Art in New York and the Centre National de la Photographie in Paris (1998), the Venice Biennale, the Museu de Arte Moderna in Rio de Janeiro, and the Whitney Museum of American Art (2001), as well as the Menil Collection in Houston (2002).
There is something unpredictable in glass that ... literally breathes new life into the artists’ creations.

ChiEko HasEgawa (NICHIDO GALLERY)
Tony Oursler, a prominent figure in the recent history of video art, was born in 1957 in New York City, where he still lives and works. In the 1980s he began to create short videos and later designed installations in which he used sound and video. Since the 1990s the use of dummies, puppets and dolls, trees and clouds of steam have become a constant in his work. Oursler is interested in the relationship between the individual and the language of mass media, which he feels is responsible for the profound changes in the modes of expression and communication in our times. The multimedia works that have made him famous are videos shown in 3D, often on spherical surfaces that accentuate the subject’s expressiveness. Deformed faces recite monologues from intimate and somewhat delirious repercussions, shown on irregular masses as they talk, observe, yell (the Talking Heads series, 1998). These were then replaced by shaving-eyes (the Eyes series, 1999), that display dilated pupils, blinks, and irises. Combining sculpture, multimedia, and recordings of the human voice, Oursler explores interacting with the public and the animation of philosophical and psychological concepts. With this new technique, he has become the first to take video beyond the limitations of a screen and by projecting an image on a uniform surface that lets the public interact with the sculpture itself. Because of this, he has been called the mastermind of video-sculpture. His works are in the collections of major museums worldwide, including MoMA, the Whitney Museum, and the Metropolitan Museum in New York; the Museum of Contemporary Art in Miami; the Centre Georges Pompidou in Paris; the Tate Gallery in London; and the National Museum in Osaka. He has also participated in numerous solo and group exhibitions around the world, including Disparities and Deformations: Our Grotesque (2004); Studio: Seven Months of My Aesthetic Education (Plus Some) at the Metropolitan Museum of Art, New York (2010); and Lock 2, 4, 6 at the Kunsthalle Bregenz (2014).
Javier Pérez was born in Bilbao in 1968. He lives and works in Barcelona. His work is permeated by a strong symbolism and accompanied by an intense use of metaphor. His works are characterized by a certain syncretism, both in the methods and the materials used. Drawing, sculpture, and video are used both independently and together to create installations in which interaction and exploration are essential.

The artist’s favorite subjects for addressing the impermanence and cyclic nature of life are the body and time. The stages of life (birth-life-procreation-death) as well as social and cultural rites of passage affect potent influences on his work. Works such as Metaexpresión, 2004, a mixed media installation exhibited at the Palacio de Cristal in Madrid, or Tempus fugit, 2002, emphasize the inexorable passage of time and the inevitable traces that it leaves on the body from a biological but, above all, an existential point of view.

The idea of cyclicality, circularity, and the line between an individual and the environment, between inside and outside, the internal and external worlds is stated clearly in his graphic works. In the Metamorfosis series, 2004, as in the work Capilares ii, 2002, this message is conveyed by the repetition of graphic signs that are almost always red and strongly connected to the idea that the venous capillaries ensure life by allowing the blood to circulate. To create his art, Pérez uses strong, often antithetical, means of communication like horsehair and polyester, silkworm cocoons and ceramics, or cattle intestines and blown glass. Playing with the contrasts, the artist confronts humanity with its own condition, torn between body and spirit, purity and impurity; attraction and repulsion, beauty and horror.

In 2001 he was invited to represent Spain at the Venice Biennale. In 2008 the Guggenheim Museum in Bilbao exhibited Pérez’s 1997 work, Muses de seducción, and bought it for its own collection. He has had other exhibitions at the Museum of Modern and Contemporary art in Strasbourg (1997), the Museo Nacional Centro Reina Sofía in Madrid (2004), and the Museo Vasco de Arte Contemporáneo in Vitoria (2006).

Some of the artist’s works are in the collections of Marseille’s cirva, the Fondation Guerlain, and Strasbourg’s Museum of Modern and Contemporary Art as well as the Basque Parliament.

ITS FRAGILITY, TRANSPARENCY, VERSATILITY, AND ABILITY TO CONTAIN YET SIMULTANEOUSLY REVEAL HAVE MADE GLASS ONE OF THE RICHEST MEANS OF ARTISTIC EXPRESSION.

FAUSTO PETRELLA (PSYCHIATRIST)
JAUME PLENSA

Born in 1955 in Barcelona, Jaume Plensa lives in both his hometown and in Paris. The artist’s early works are characterized by anthropomorphic forms made of heavy materials like iron and bronze. Over time, he has experimented with new synthetic plastics as well as glass and alabaster, intrigued by the luminous effects and the shapes they can take on. Many of his sculptures depict a seated human figure that has been created by an assembly of alphanumerical characters from various languages. When combined, they become poems or parts of words that are particularly meaningful to the artist.

Through the use of letters and symbols belonging to various peoples, the artist seeks to celebrate diversity and to emphasize the importance of cultural unity, as in his work The Move, 2007. Located on the Saint-Jaume bastion in Antibes, the work encourages the endless passage between space and sculpture but also the continuous exchange between different cultures. Using conventional sculptural materials (such as glass, metal, bronze, aluminum) together with other unusual ones (such as water, light, sound, and video), Plensa always prompts a dialogue between the work itself and the space surrounding it. In Crown Fountain, 2000–2005, at Millennium Park in Chicago, the artist wanted to create a free, fun space for people: a fountain constructed of glass, steel, black granite, but also two screens where videos of 1,000 different faces were shown. Consisting of two, 16-meter high towers and placed on a water surface of 70 x 14 meters, the fountain creates several water features connected to the images gradually screened.

Parallel to the sculptures, the artist has created an equally important body of works on paper. Since 1995 he has collaborated with the theater group La Fura dels Baus, designing theatrical costumes and sets. Since 1992 he has won several awards, both nationally and internationally. In 2003 he received an honorary doctorate from the School of the Art Institute of Chicago.

He has participated in numerous exhibitions including ones at the Fundació Joan Miró in Barcelona (1996); the Galerie Nationale du Jeu de Paume in Paris (1997); the Museo Nacional Centro de Arte Reina Sofia in Madrid (2000); the Fondation Européenne pour la Sculpture in Brussels (2002); and the Palazzo delle Papesse in Siena (2004). He is also the only living artist who has had an exhibition at the Nasher Sculpture Center in Dallas, United States.
GLASSMAN II
2004 / DETAIL
36 x 234 x 90 cm
COURTESY THE ARTIST
AND GALERIE LESENG, PARIS
Silvano Rubino was born in 1952 in Venice, where he lives and works. He studied Painting and Fresco at the Istituto d’Arte and at the Accademia di Belle Arti in Venice. Since 1984 he has also created set and costume design for theater and dance performances, achieving great scenic effect. His artistic activity includes large-format photography, video, and installations, always aiming at relating the artwork to the individual space, environment, and observer. His artistic research in glass consists in giving new shapes and dimensions to commonly used items. His glass works enhance the ambiguity of the material, which in glass can become something else, and concentrates on forms. He actually gives his works a self-sufficient and autonomous life, exploiting the deceptive effects of the material. He has taught Drawing and Planning at the Abate Zanetti School of Glass in Murano. His works were presented in Glass in the World Today at the Istituto Veneto di Scienze, Lettere ed Arti in Venice in 2004, In Perfect Scale at the Galleria Michela Rizzo in 2006, and at Palazzo Toigo, Fondazione Berengo La Masa, Venice, with the exhibition In equilibrio tra due punti sospesi.

Glass is a special artistic medium, a sort of versatile, expressive orchestra in which a variety of sounds, timbres, and colors come together in an instant and perfect synthesis.

Giacinto Di Pietrantonio (Director of GAMEC)
Ursula von Rydingsvard was born in Deensen, Germany, in 1942. During World War II her family, of Polish-Ukrainian origins, was enslaved and forced to work on farms. This dramatic experience has unquestionably influenced her artistic style. When the artist was nine years old, her family emigrated to the United States where she has continued to live. Von Rydingsvard studied at Columbia University, earning an MFA in 1975. Four years later, the artist received a grant from the National Endowment for the Arts, followed by a Guggenheim Fellowship. In 1991, she received an honorary doctorate from the Maryland Institute College of Art in Baltimore.

The artist is known internationally for her imposing sculptures she creates with cedar wood. Her past, marked by the continual wandering from one refugee camp to another, is relived through the choice of wood and manual labor. Each time the artist selects, cuts, shapes, and finishes the surface of the wood, she again evokes her difficult childhood: the artisanal process, linked to the real world, becomes a vehicle for her introspective, evocative, and highly personal art.

Her works have been exhibited in important museums around the world, including many in New York such as the Whitney Museum of American Art, the Metropolitan Museum of Art, the MoMA, and the Brooklyn Museum. The artist reached a high point in her career in 1997 when Microsoft commissioned her to create Skip to My Lou, a sculpture for the company’s headquarters in Redmond, Washington. In 2006, an outdoor installation was exhibited in Madison Square Park. At this time, the artist continues to work in New York, specifically in the dynamic Brooklyn neighborhood where her studio is located.
Judith Schaechter was born in Newton, Massachusetts, in 1961. She lives and works in Philadelphia. Educated at Rhode Island School of Design, Schaechter discovered in stained glass her unique creative voice. In this dazzling and virtually untapped medium, Schaechter has combined high craft with the historical traditionalism of painting on canvas to create a singular voice in contemporary art. The artist graduated in 1983 and has since worked to overcome the conventions of stained glass, adopting innovative techniques to maximize the medium’s potential. Her graphic leaded line, signature, doe-eyed figures, and inventive layering systems have made her a critically acclaimed artist, and she is as respected for her studio practice as well as her challenging subject matter. The artist’s light boxes are comprised of multi-layered flash glass that has been cut and ground smooth, then variously painted, sandblasted, frosted, and engraved, resulting in incredibly detailed yet ambiguous narratives that bridge past centuries with the present. In a field much better known for abstraction, her studio practice relies on painstaking craftsmanship and the human figure, giving new meaning to the stained glass genre by creating both spatial and narrative depth through paper-thin layers of glass. Schaechter employs traditional copper foil and soldering techniques, balancing both practice and medium that hearkens back to the Middle Ages with contemporary iconography. Schaechter is in the permanent collections of the Metropolitan Museum of Art, New York, the Smithsonian Institute of American Art, Washington, D.C., Philadelphia Museum of Art, Philadelphia, de Young Museum, San Francisco, Victoria and Albert Museum, London, Montreal Museum of Fine Arts, Quebec, the Museum of Arts and Design, New York, Corning Museum, Corning, New York, Carnegie Museum of Art, Pittsburgh, and many other prestigious institutions. The artist’s work was included in the 2000 Whitney Biennial and the 2011 Venice Biennale. She is the recipient of a 2005 Guggenheim Fellowship, a USA Artists Fellowship, the Joan Mitchell Award, the Louis Comfort Tiffany Foundation Award, and two NEA grants.

She is the recipient of a 2005 Guggenheim Fellowship, a USA Artists Fellowship, the Joan Mitchell Award, the Louis Comfort Tiffany Foundation Award, and two NEA grants.
Thomas Schütte was born in Oldenburg, Germany, in 1954. He lives in Düsseldorf. After studying painting with Daniel Buren, Gerhard Richter, and Blinky Palermo, he moved towards the worlds of sculpture and architecture. In the 1980s his architectural models inspired reflection on the social consequences of post-war reconstruction policies and choices in Germany. In his 1985 work Fluss der Gedanken, designed for the Neuengamme concentration camp, he addresses the question of the relationship between a work of art and the context in which it is placed. The theme of the artist’s role in society permeates all his works. Unlike Joseph Beuys, according to whom the artist should act as a guide for civil society, Schütte believes the artist should describe reality with objective humor devoid of any foolish educational aspirations.

Architecture and such themes related to it as the concept of monumentality are other questions raised in his work. With his series of architectural models of real and imaginary buildings, he reflects on both the relationship of the structure to the surrounding space as well as the contrast between a building’s grandeur and monumentality and the sometimes delicate appearance of materials that make it up, as in the work ‘Model for a Hotel’, 2007, on display in Trafalgar Square as part of a public art project. His work is imbued with social and political issues, but also with such human feelings as vulnerability, isolation, and despair. The ambivalence and faked hood of modern society (‘United Enemies’, 1993–1994) as well as its depravity (‘Efficiency Men’, 2005) are depicted by Schütte in the iron and colored silicone sculptures that portray men with grotesque and caricatured faces, forced to stay together forever because they are tied together by lies or bent under the crushing weight of compromise.

His works have exhibited in numerous museums around the world: the Van Abbemuseum, Eindhoven (1990); the Hamburger Kunsthalle, Hamburg (1994); the Württembergischer Kunstverein, Stuttgart (1994); the Musee d’Art Contemporain, Nice (1994); the Museu Serralves Porto, Porto (1998); the art, Porto 1990; the Whitechapel Art Gallery, London (1998); and the venus of a public art project. His work in Düsseldorf Prize in 2010, previously given to Bruce Nauman, Marlene Dumas, and Rosemarie Trockel.

In 2005, he was awarded the Golden Lion at the Venice Biennale. In addition to having been invited three times to Documenta in Kassel, he was awarded the Dresden Prize in 2010, previously given to Bruce Nauman, Marlene Dumas, and Rosemarie Trockel.

Glass is an avant-gardist, a stubborn material that, by itself, can assume an independent form beyond its creator’s imagination.

Lidewij Edelkoort (Curator and trend forecaster)
Joyce Jane Scott was born in 1948 in Baltimore, where she has been a lifetime resident. She descends from several generations of Southern craft artisans. Having made paintings, dolls, clothing, and jewelry in the 1960s, Scott’s first artworks emerged in the early 1970s, colorful flat textiles made with her quilt-maker mother, with whom she continued to live and collaborate. Scott received a BFA degree from the Maryland Institute College of Art in 1970 and the following year an MFA in Crafts from Instituto Allende in San Miguel Allende, Guanajuato, Mexico. She pursued further study at Rochester Institute of Technology in New York and then the Haystack Mountain School of Crafts in Maine. Using fiber, beads, wire, thread, and other mixed media, the strands of Joyce Jane Scott’s urban, multi-ethnic African-American, female identity and experience unite in her art. Her flat weaving led to jewelry and soft sculptures that further flowered into the small standing figurative beadwork assemblages for which she is best known. Her art combines the caring humanism of craft with the intellectualism and political drive of social protest. Glass as the form of beadwork has been part of her art from its beginnings. Starting in the mid-1990s her collaborations with teams of artisans in several US glass shops and recently a Venetian glass studio have assumed a key role in her works. The resulting cast, blown, pressed, and fused glass has increased the scale, sensuality, and seduction of her art. Scott’s intensified fascination with and incorporation of African art and knockoffs of royal European porcelain has pushed the globalization and layered complexity of her vision. With her work now in numerous private and public collections, Scott’s much increased importance and visibility connects with the broader shifts in the art world; the upgrading of craft and the media associated with it; the recognition of the talents and distinct visions of women artists; the diminution of the artistic centrality of New York City and New York artists; and the ascending acknowledgement and centrality of African-American artists. The first thirty years of Scott’s art was surveyed in Joyce J. Scott: Kicking’ It With the Old Masters, at The Baltimore Museum of Art, the Maryland Institute College of Art, and elsewhere in Baltimore. An updated, smaller solo show entitled Kicking’ It with Joyce J. Scott toured to ten US museums from 2005 to 2007. A solo Scott museum show is currently being organized.

Kiki Smith was born in Nuremberg, Germany, in 1954. She lives and works in New York. The daughter of the sculptor Tony Smith, she began as a young girl by helping her father make cardboard models for his sculptures. Her work consists of sculptures, prints, and installations. In the 1980s, she abandoned the figurative tradition and produced objects and drawings based on organs, cells, and the human nervous system. Soon her work included animals, domestic objects, elements from kiki tales and classical mythology. She is concerned with human nature and its philosophical, social, and spiritual aspects and her works also include a wide-ranging series of self-portraits. She deals with life, death, and resurrection, a legacy of her upbringing in the Catholic Church. Furthermore, she has always had a deep passion for working and collaborating with people in shared environments like universities, foundations, and print workshops which drive her to work in different countries. Recently her work has been inspired by the life of St. Genevieve. She represents the saint along with a wolf, thus investigating the symbolic relationships between humans and animals. In 2003, a retrospective of her prints was held at MoMA in New York, followed by exhibitions at the Fondazione Querini Stampalia in Venice in 2005, the San Francisco Museum of Modern Art in 2006, and the Whitney Museum of American Art in 2007. In 2005, she was awarded the prestigious Showhegan Medal for Sculpture and in 2009 the Brooklyn Museum Women In The Arts Award. Smith’s work can be found in prestigious international museum collections such as the Metropolitan Museum of Art, New York, the Tate Modern, London, the Victoria and Albert Museum, London, and the Museum of Fine Arts, Boston.

A typical object of the Murano tradition, a chandelier, was changed into something different, an animal’s dead body with its entrails exhibited to the public.

Javier Pérez (artist)
Every snowflake has a different shape.

Yutaka Sone was born in 1965 in Shizuoka, Japan, and currently lives and works in Los Angeles. The artist’s architectural training has had a profound effect on his subsequent artistic output, which is marked by an almost obsessive attention to detail and by the structural-volumetrical construction of his pieces. Yutaka Sone is primarily a sculptor, but he has also resorted to painting, drawing, photography, video, and performance.

Known for his love of nature, that which truly characterizes his work is found in his rejection of the dialectical and in the contrast between nature and artifice. Sone concerns himself with micro- and macrocosms, the natural and the artificial, without distinction. His works are created by combining organic and synthetic materials and by contrasting the city’s image with that of the jungle. It was in this sense that Little Manhattan, 2007–2009, was created, a depiction of the city laboriously carved, in minute detail, from a block of marble and worked out using photographs, Google Earth, and helicopter flights over the city.

A particular interest in the utopian aspects of language and narrative emerges from his artwork, with the island being, in this sense, a recurring theme. His most recent solo exhibitions include Baby Banana Tree at the Boone Sculpture Garden in Pasadena, California, (2009); Yutaka Sone: Snow at the Maison Hermès Le Forum in Tokyo (2010); and Yutaka Sone: Future Moment at the Tokyo Opera City Art Gallery (2011). He has also exhibited at the Museum of Contemporary Art in Los Angeles (2003); the 50th Venice Biennale (2003), representing Japan, together with Motohiko Odani; the Kunsthalle in Bern, Switzerland; the Aspen Art Museum in Colorado (2006); and the Parasol Unit Foundation for Contemporary Art in London (2007).

Among his major exhibitions are the 7th Istanbul Biennial (2001); the 25th Biennial de São Paulo (2003); the 2004 Whitney Biennial at the Whitney Museum of American Art (2004); and Badlands: New Horizons in Landscape at the Massachusetts Museum of Contemporary Art (2000).
Mike and Doug Starn were born in New Jersey in 1961. At present, they live and work in New York. In the 1980s they began to challenge categorization, working with photography in combination with sculpture, painting, video, and installation. Their most recent work is entitled Big Bambù, 2008, a monumental bamboo structure made by combining different creative and design skills in a single installation. The large-scale work (15 meters high) was made possible with the help of a group of climbers who built the structure, whose size, like a living organism, grows in spring and shrinks in autumn. The installation is a work in progress that adapts to the exhibition space and the season, growing and developing with the passage of time. This recent work is closely related to their early work in which the artists once filled trees, insects, and leaves with a particular symbolic and metaphorical importance.

Even light, for the Starn Brothers, assumes a central role at both a technical and a symbolic level. Indeed, it represents a cycle of time and change and it interests them also as a work tool. Their artistic explorations have revolved around light absorption techniques and old carbon-printing techniques. Their works include Sphere of Influence, 1994, Behind Your Eye, 2004, Absorption + Transmission, 2005/2006, and Gravity of Light, 2004/2008. The Starns have received arts grants (1987 and 1991) and the Infinity Award for Fine Art Photography (1992). In the 1990s they received an artistic commission from NASA.

Their principal works are found in such private and public collections as those of the Museum of Modern Art, the Solomon R. Guggenheim Museum, and the Whitney Museum of American Art, New York; the Museum of Modern Art in San Francisco; The National Gallery of Victoria in Melbourne; and La Maison Européenne de la Photographie in Paris.
Patricia Urquiola was born in 1961 in Oviedo, Spain. She attended the Department of Architecture at the Universidad Politécnica de Madrid and then moved to Italy to attend the Politecnico di Milano. In the early 1990s, she became the assistant of Eugenio Bettinelli and Achille Castiglioni. As a teacher, she began a series of lessons at both the Politechnico and the ensco in Paris. She then undertook a series of collaborations: she opened an architecture and design firm, worked with Vico Magistretti, managed the firms of Lázaro Arsuaga, worked with such prestigious brands as Alessi, Artemide, Kartell, Cappellini, Cassina and, at the same time, with De Vorm, Fasem, so Italia, Moroso, and B & B for whom she created three collections: Canasta, Crinoline, and Bardolino, between 2007 and 2009.

Patricia Urquiola’s works are a perfect combination of minimalism and femininity, especially admired for her harmonious use of form and light. Her works are characterized by a continuous experimentation with new forms and styles. She gained international recognition in 2001 and opened her first studio of design and architecture. That same year some of her works were selected for the Italian Design and the International Design Yearbook exhibitions. She was chosen as the jury president for the 19th exit Design Award and has held conferences at the Domus Academy. In recent years, she has received numerous awards including Designer of the Year and Design Prize Cologne. At present, Patricia Urquiola continues her many activities in her Milano studio. In 2011, she enthusiastically accepted the invitation to the Glasstress exhibition, a collateral event of the 54th International Art Exhibition, Venice Biennale, from Adriano Berengo, the event’s originator and organizer, for which she created a highly original collection of blown glass, a material with which she had not yet experimented and which was greatly appreciated by the public and the press.

GLASSTRESS
IT'S PURE ALCHEMY!

PATRICIA URQUIOLA (DESIGNER)
Koen Vanmechelen was born in Sint-Truiden, Belgium, in 1965; he lives and works in Meeuwen, Belgium. His works range from highly expressive paintings and drawings to photography, video, installations, works in glass, and a recurring wooden sculpture, all dealing with the theme of the chicken and the egg. These important symbols connect Koen’s art to scientific, political, philosophical, and ethical issues, the subject of debates and lectures. His work can be defined by three main categories: The Cosmogolem, a powerful, wooden sculpture adopted around the world as a symbol for children’s rights. Golem, the principle of man as creator, was the starting point of all his work and still is an important pillar for him; The Cosmopolitan Chicken Project (ccp), the core of his extensive breeding program with chicken breeds from all over the world, meant to merge into a new species, a universal chicken or Superbastard; and Medusa, where art meets science, the scientific part that used to be called The Walking Egg and can be considered the think tank behind the ccp “Cross-breeding is the only thing,” says Vanmechelen. “We need to cross-breed across boundaries if we want the world not to perish. We need to think cosmopolitical. Nothing is as beautiful as joining with other cultures and taking energy from them.”

He has held conferences all over the world and participated in the most important events of contemporary art.

The quality and diversity of the images of the glass sculptures at Berengo serve to reinforce the idea that glass is truly a contemporary material.

Ian Findlay (Asian Art News)
Those intent on retracing the history and development of Murano glass in the twentieth century cannot help but focus their attention on the 1950s and 1960s. Over the course of these decades, an extraordinary woman nurtured incredible sensitivity towards art, cultivating the idea of inviting modern artists to create works in glass. That woman was Peggy Guggenheim.

She can be credited for launching a glass Renaissance of sorts, drawing in names like Max Ernst, Marc Chagall, Le Corbusier, Mark Tobey, Oskar Kokoschka, and Lucio Fontana. Despite expectations, her powerful sense of intuition was not fully developed in the years to follow; nonetheless, her insight became the inspiring principle behind the ambitious cultural project championed by Adriano Berengo: Glasstress. The Venice Biennale, a Venetian institution boasting over 110 years of activities, has shown striking interest in Glasstress since its first edition in 2009: thanks to the distinct “Glocal” nature of the initiative. Designed to enhance the artistic production of Murano, a landmark in the history of Venice, the event has succeeded in contextually pervading the contemporary art world’s most avant-garde scene. The two editions, Glasstress 2009 and Glasstress 2011, were both official side events for the International Exhibition of Art at Venice’s Biennale. Though different, each event shared the same goal: to demonstrate how glass continues to increasingly prove itself as a material capable of expressing the artistic needs of contemporary art and design. To reach this aim, the first event in 2009 strove to document how glass was employed in the past by leading artists such as Josef Albers, Man Ray, Anton Pevsner, Lucio Fontana, César, and Robert Rauschenberg.

In fact, the show primarily focused on pre-existing art from large established collections, with the exception of new works by artists like Fred Wilson, Tony Cragg, Jan Fabre, and Koen Vanmechelen, which spotlighted the potential of glass, focusing on its use in the future. Thanks to contributions by its four curators, Glasstress 2011 also achieved its objective, showcasing a sensational selection of new creations by renowned artists and designers including Michael Joo, Vik Muniz, Javier Pérez, Jaume Plensa, Thomas Schutte, Patricia Urquiola, Fred Wilson, and Zhang Huan.

Berengo Studio, with Venice Projects, offers the opportunity to recreate the ambitious works that other studios are hereby to develop. The uniqueness of its approach lies in inviting artists that have never worked with glass before, guaranteeing results that prove totally released from the traditional canons of glassmaking. At the same time, it creates these works with the support of expert glass masters who are highly skilled in the sector’s most complex techniques. The artists’ overall cultural diversity is an integral part of the project designed to involve them in the first person, spurring a creative process characterized by collaboration and the exchange of know-how. It also fostered connections with a new material whose essence conveys a dynamic relationship between volume and empty space, density and fragility, fluidity, crystallization, reflections and transparency. By absorbing surrounding experiences and energies, participants freed glass from its material nature, restoring it to a brand of lightness capable of expressing the full significance of their quest. Never before has matter been so malleable or “dressed,” brought to its very limit by challenging the skills of masters and their time-tested techniques.

In 2011, Glasstress became a worldwide traveling exhibition. In fact, a selection of its works has journeyed from Venice to Riga’s National Museum of Latvian Art and Stockholm’s Millesgården, bringing together contemporary artists from diverse geographic and cultural contexts.

Today, Glasstress is debuting at mad in New York with a noteworthy exhibition that officially marks the grand entrance of glass into the world of contemporary art and design, foreshadowing the beginning of a new era for glass.
